

Automatically Records:

- All Applications
- All Web Sites Visited
- All Chat Conversations
- All Keystrokes Typed
- All Display Screens
- All Emails Viewed

Install Spector on your PC and it will record EVERYTHING anyone does on the Internet.

Spector automatically takes hundreds of snapshots every hour, very much like a surveillance camera. With Spector, you will be able to SEE what your spouse, kids and employees have been doing online and offline.

Automatically Record Everything Your Spouse, Children & Employees Do Online

Spector

Spector

Imagine a surveillance camera pointed directly at your computer monitor, filming away everything that is done on the PC. That is the idea behind the number one selling Internet Monitoring and Surveillance software, Spector.

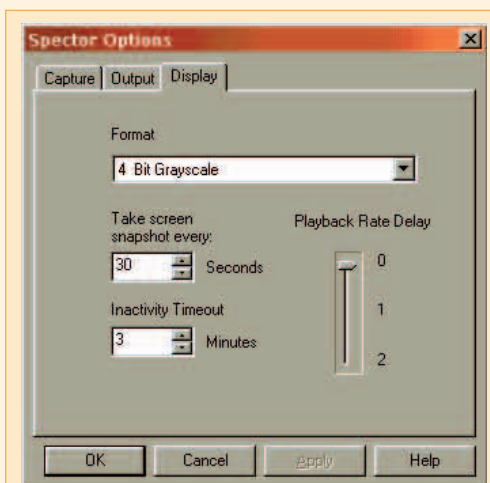

Imagine being able to download, install and start recording PC and Internet activity in less than 10 minutes.

Imagine virtually no learning curve - if you can use a VCR, you already know how to use Spector.

Spector works by taking a snapshot of whatever is on the computer screen and saves it away in a hidden location on your computer's hard drive. A few seconds later, Spector takes another picture. In fact, Spector can automatically take a picture of your computer screen as frequently as once per second.

That means, you get recordings of all chat conversations, instant messages, e-mails typed and read, all web sites visited, all programs run, all keystrokes typed - **EVERYTHING** they do on the computer and on the Internet.

You can come back to the computer a few minutes, a few hours, a few days or weeks later and **SEE EXACTLY** what they were doing, because Spector has recorded it.

Spector automatically takes snapshots of your computer screen, as often as once per second, or as infrequently as once every few minutes. You decide how often and in what format (Grayscale or Color) Spector records.

Spector is appropriate for parents concerned about what their children do online, or worried about protecting their children from the dangers of the Internet.

Spector is also ideal for businesses concerned about how their employees use company computers. Are your employees goofing off too much online? Sending sexually or racially offensive e-mail jokes? Spreading company confidential information in anonymous chat and message boards? You'll find out with Spector.

And, if you're concerned about what your spouse or mate is doing online all hours of the evening, there is no faster or more accurate way to find out than with Spector.

Print recorded screenshots or export images to .jpg or .bmp file formats.

Simple VCR-like control of your recordings. Play your recordings like a movie, jump to the first or last frame, or review one frame at a time.

Quick, one click access to frequently used program features like Event Listing of URLs, Keystrokes typed, and Search.

Automatically Records

- All Applications
- All Web Sites Visited
- All Chat Conversations
- All Keystrokes Typed
- All Display Screens
- All Emails Viewed
